## **DETAILED ACTION**

### ***Oath/Declaration***

It does not identify the city and either state or foreign country of residence of each inventor. The residence information may be provided on either an application data sheet or supplemental oath or declaration.

It does not identify the mailing address of each inventor. A mailing address is an address at which an inventor customarily receives his or her mail and may be either a home or business address. The mailing address should include the ZIP Code designation. The mailing address may be provided in an application data sheet or a supplemental oath or declaration. See 37 CFR 1.63(c) and 37 CFR 1.76.

### ***Information Disclosure Statement***

1. The information disclosure statement filed 6/14/04 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because U.S. Patent Application number 10/699,150 is not the correct application number. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

### ***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined

Art Unit: 2886

application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-12 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 6 of copending Application No. 10/746,078 in view of Hannah (US 6,774,333). This is a provisional obviousness-type double patenting rejection.

Application No. 10/746,078 shows a method of controlling carbon nanotubes using optical traps by using polarized laser (claim 6). Application No. 10/746,078 does not show that the alignment is monitored with another laser.

Smalley show a method to determine the alignment of nanotubes (Figure 2 and column 10, lines 1-47) and discusses the relationship between the polarized laser and the magnetic field (e.g. signal being maximum when light is perpendicular to magnetic field).

At the time of the invention, one of ordinary skill in the art would have used the alignment determining means taught by Smalley when manipulating nanotubes taught by Smalley in order to monitor the alignment of the nanotubes.

With respect to claim 2, Smalley shows the monitoring of intensity (column 10, lines 25-34).

Art Unit: 2886

With respect to claims 3-7, Application No. 10/746,078 shows the passages used for trapping and moving the nanotubes.

With respect to claim claims 9-11, Hannah and Application No. 10/746,078 show a polarizer to rotate the laser beam to rotate the nanotubes. Smalley shows a photodetector (218).

4. With respect to claim 12, the use of mirrors to direct light beams in the desired direction is of ordinary skill in the art. See for example, Smalley's mirrors in figure 2 (206, 208)

#### *Response to Arguments*

The rejection under double patenting still stands as the Applicant has not overcome the rejection by filing a terminal disclaimer.

The rejection under USC 103 is withdrawn.

#### *Conclusion*

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 2886

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
